Day 06 – Linux Fundamentals: Read and Write Text Files

Objective

Practice creating, writing, appending, and reading text files using basic Linux commands.

Commands Practiced

1. touch notes.txt — Created an empty file.

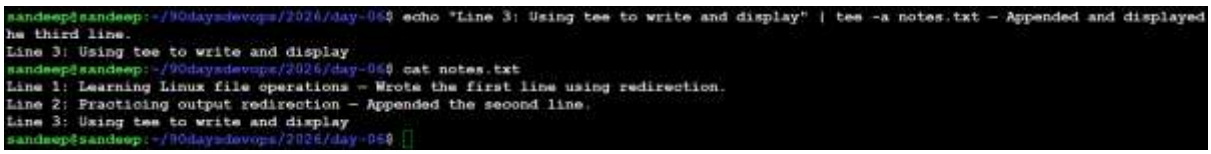

2. echo "Line 1: Learning Linux file operations" > notes.txt — Wrote the first line using redirection.

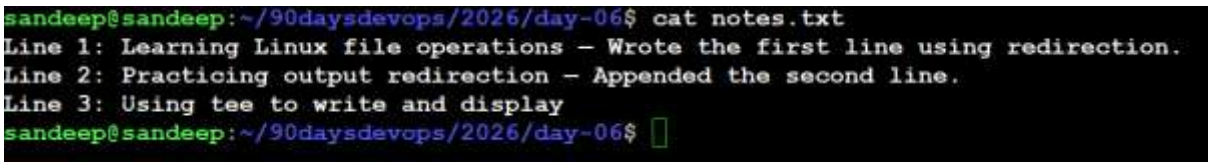

3. echo "Line 2: Practicing output redirection" >> notes.txt — Appended the second line.

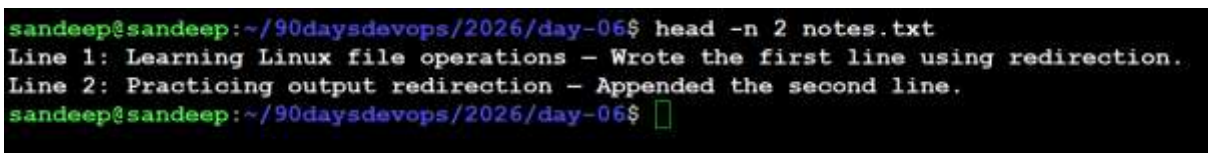

4. echo "Line 3: Using tee to write and display" | tee -a notes.txt — Appended and displayed the third line.

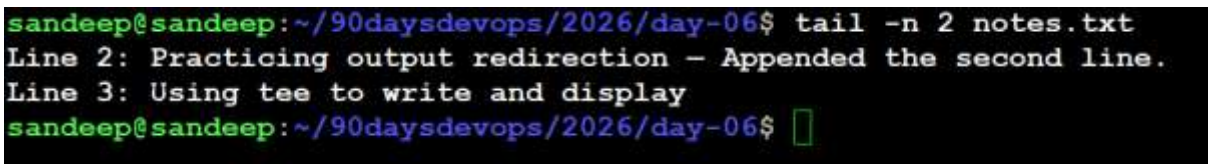

5. cat notes.txt — Displayed the complete file.

6. head -n 2 notes.txt — Displayed the first two lines.

7. tail -n 2 notes.txt — Displayed the last two lines.

8. wc -l notes.txt — Counted the lines in the file.

```
sandeep@sandeep:~/90daysdevops/2026/day-06$ wc -l notes.txt
3 notes.txt
sandeep@sandeep:~/90daysdevops/2026/day-06$
```

Key Learnings

- > creates or overwrites file contents.
- >> appends content without removing existing lines.
- tee -a displays text and appends it to a file.
- cat, head, and tail help read complete or partial file contents.

Result

Successfully practiced basic Linux file input/output operations and verified the contents of notes.txt.
